Career Objective

AI and Computer Science undergraduate specializing in Natural Language Processing, Machine Learning, and workflow automation. Proficient in Python, Scikit-learn, PyTorch, and automation platforms (n8n). Seeking an entry-level AI/ML Developer or Data/AI Trainer role to build and deploy intelligent, automated systems.

Education

Bachelor of Science in Computers and Artificial Intelligence

Sep 2025 – Expected May 2029

Faculty of Computers and Artificial Intelligence, Benha University, Cairo, Egypt

Technical Skills

AI & Machine Learning: Natural Language Processing (NLP), Supervised Learning, Scikit-learn, PyTorch, LLM Prompt Engineering, Text Classification, Data Cleaning & Vectorization

Automation & Tools: n8n, LLM Agents & Tool-Calling, Retrieval-Augmented Generation (RAG), API Integrations, Git, GitHub, VS Code, Google Colab

Programming Languages: Python, C++

Embedded & Hardware: Arduino

Language Skills: Arabic – Native, English – Good, French – Basic

AI & Software Projects

AI Research Assistant – Lead AI Developer

- Built an autonomous, agentic research assistant (Ollama qwen2.5:7b) that dynamically selects among six Python tools — web search, page scraping, summarization, source comparison, and report generation — via LLM-driven tool-calling, producing structured, sourced research reports without hard-coded workflow logic.
- Implemented a Retrieval-Augmented Generation (RAG) pipeline with ChromaDB and sentence-transformers embeddings to power a grounded follow-up Q&A chat over previously collected research sources, with input validation and per-tool error handling for reliability.

AI Resume & Portfolio Job Matcher – Lead AI Developer

- Developed a two-pass local LLM pipeline (Ollama, Llama 3.1:8b) that ingests resumes (PDF/DOCX/raw text) or portfolio URLs, extracts a structured JSON candidate profile, and generates a job-match report with match scores, strengths, and skill gaps.
- Built a Streamlit interface integrating web scraping (BeautifulSoup4) and document parsing for a fully local, privacy-preserving candidate-to-job matching workflow.

AI-Powered STEM Student Chatbot Assistant – Lead AI Developer

- Designed a conversational assistant using structured LLM prompt engineering and dialogue-flow logic to explain STEM concepts in plain language.
- Built reusable prompt templates that produced context-aware, curriculum-aligned responses for students.

Fruits Classification System – Computer Vision Developer

- Built a supervised image classification pipeline in Python to categorize a multi-class fruit image dataset.
- Applied data preprocessing and feature extraction to improve model accuracy, validated using standard classification metrics.

STEM Engineering Projects

Weather Station & Eco-Friendly Monitoring System – STEM Project Developer

- Built an environmental monitoring system combining hardware sensors with C++ firmware logic.
- Programmed real-time routines to collect and process temperature, humidity, and gas concentration data.

Hydroponics & Smart Irrigation Control System – STEM Project Developer

- Developed an automated smart-agriculture prototype using sensor feedback loops to monitor water and nutrient levels.
- Applied embedded programming logic to reduce resource waste and improve system responsiveness.

Training & Certifications

AI Automation Track, Digital Egypt Pioneers Initiative (DEPI) – Ministry of Communications and Information Technology (MCIT) Jul 2026 – Present

- Intensive training in AI workflow automation (n8n), API integrations, and prompt engineering strategies.

Artificial Intelligence Core Concepts and Practical Skills, Neurova AI Bootcamp May 2026

C++ Programming Course, SoloLearn Dec 2025

- Completed self-paced coursework covering C++ fundamentals, syntax, and object-oriented programming concepts.

Arduino Programming Course, Robotix Aug 2023

- Completed hands-on training in Arduino programming and embedded hardware fundamentals.
